

International Conference: PROVENCE' 2009

Registration / Information

Seismic risk in moderate seismicity area: from hazard to vulnerability.

“What did we learn since the 1909 Provence (Lambesc) Earthquake?”

Aix en Provence (France) July 6-8, 2009

UNIVERSITÉ PAUL-CÉZANNE - Campus Montperrin
6, avenue du Pignonnet - 13100 Aix-en-Provence

The 11 June 1909, Provence (Lambesc) earthquake is the strongest instrumental seismic event recorded in French history. It destroyed several villages between Aix-en-Provence and Salon-de-Provence and caused 46 deaths, a rather high death toll for such a sparsely populated region at this time.

The 100th anniversary of this dramatic, though rare, event provides the opportunity to organize a conference on the “seismic risk assessment in regions of moderate seismicity”.

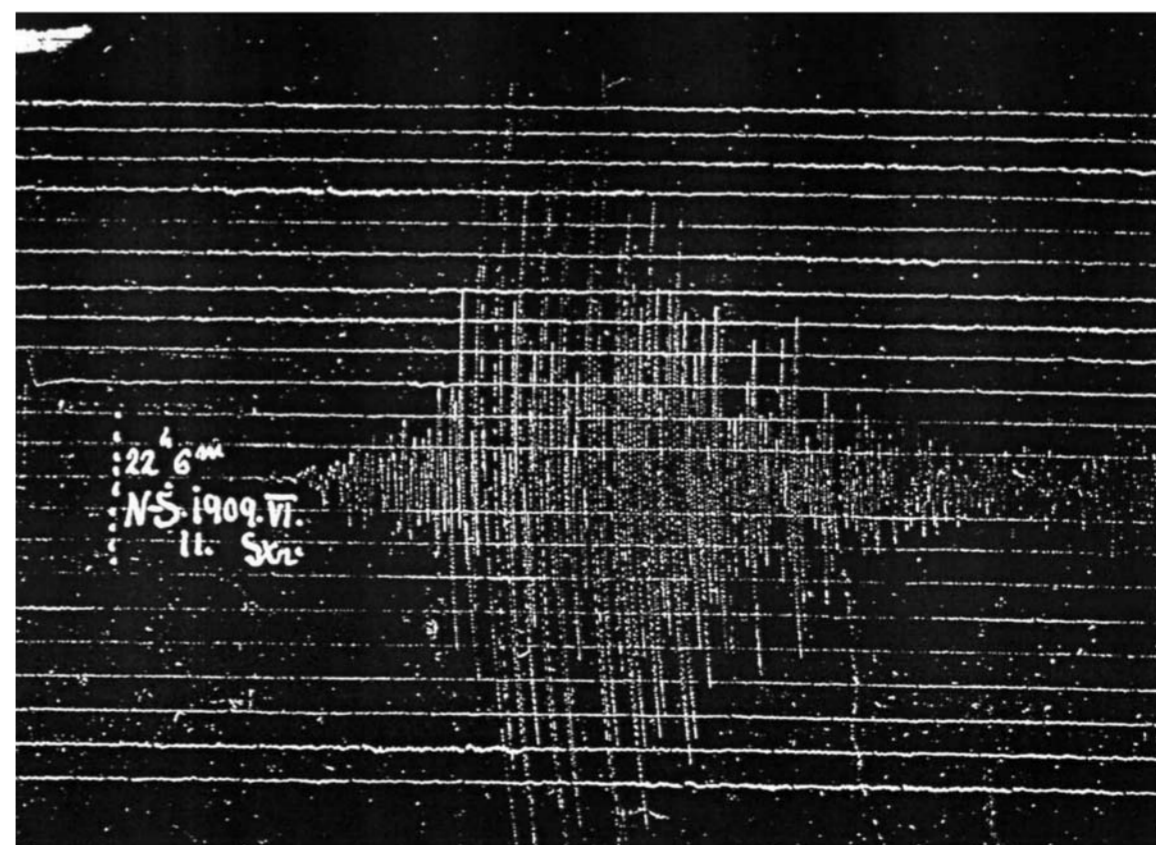

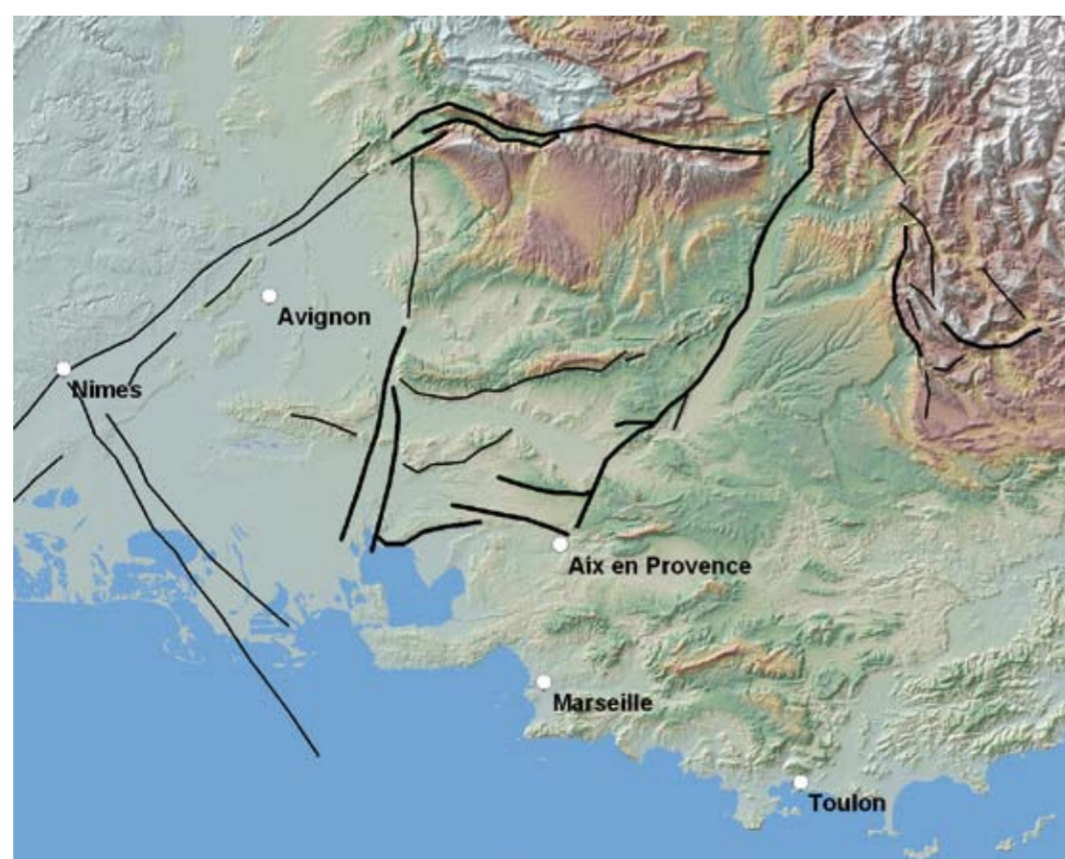

SCIENTIFIC COMMITTEE

Co-chairs:

Pierre-Yves Bard *LGIT, Grenoble*
Olivier Bellier *CEREGE, Aix-en-Provence*
Fabrice Hollender *CEA, St-Paul lez Durance*
Hormoz Modaressi *BRGM, Orléans*

President:

Xavier Le Pichon, Collège de France,
Institut de France - Académie des sciences
